Subject: RCMP Workshop #3

Good Morning/Afternoon

The District will be postponing the ROC Workshop #3 scheduled for November 8, 2019, and rescheduling to a date yet to be determined in 2019.

Earlier this year the District initiated a Countywide Water Reuse Master Planning effort whose purpose is to create a collaborative strategy to integrate and expand recycled and purified water as a local, reliable, environmentally adaptive, drought-resistant water supply and guide strategic investment of public funds over the next 20 years. This Countywide Water Reuse Master Plan (CWRMP) will result in a comprehensive master plan to facilitate non-potable reuse (NPR) integration and expansion with potable reuse (PR) water development in Santa Clara County in collaboration with recycled water producers and through engagement of critical stakeholders. The Master Plan will also provide a framework to make collaborative decisions and implement integrated actions to increase water supply reliability throughout the region.

As the CWRMP and the Reverse Osmosis Concentrate Management (ROCM) programs both evolved further during the past 3-4 months it became evident that additional synchronization of the two are necessary. As such, the District has decided to defer various ROCM tasks until sufficient details of the countywide efforts emerge. The resultant planning information and details will then be utilized to better focus and increase the precision of the ROCM alternative analysis.

This approach will result in having the two programs (CWRMP and ROCM) converge in a cohesive fashion as they proceed towards their estimated completion dates of July 2019 and December 2019, respectively.

District staff will provide periodic updates for these two activities so participants are informed of the planning progress and its influence to the ROC management program.
